Features:

Instance Features

- ☒ Database Engine Services
- ☒ SQL Server Replication

Shared Features

- ☒ SQL Client Connectivity SDK

Redistributable Features

Feature description:

The configuration and operation of each instance feature of a SQL Server instance is isolated from other SQL Server instances. SQL Server instances can operate side-by-side on the same computer.

Prerequisites for selected features:

Already installed:

- Windows PowerShell 3.0 or higher
- Microsoft Visual Studio 2010 Redistributable

Disk Space Requirements

Drive C: 1058 MB required, 18298 MB available

Select All Unselect All

Instance root directory: C:\Program Files\Microsoft SQL Server\

Shared feature directory: C:\Program Files\Microsoft SQL Server\

Shared feature directory (x86): C:\Program Files (x86)\Microsoft SQL Server\

Service Accounts Collation

Microsoft recommends that you use a separate account for each SQL Server service.

Service	Account Name	Password	Startup Type
SQL Server Database Engine	NT Service\MSSQL\$SQL...		Automatic
SQL Server Browser	NT AUTHORITY\LOCAL ...		Disabled

☐ Grant Perform Volume Maintenance Task privilege to SQL Server Database Engine Service

This privilege enables instant file initialization by avoiding zeroing of data pages. This may lead to information disclosure by allowing deleted content to be accessed.

SQL Server 2016 installation completed successfully.

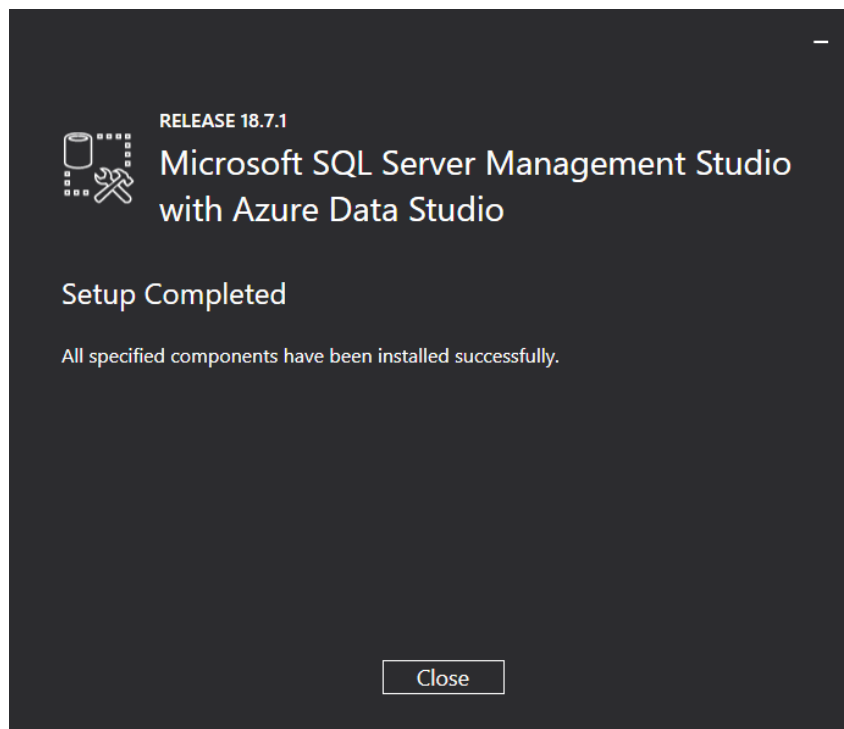

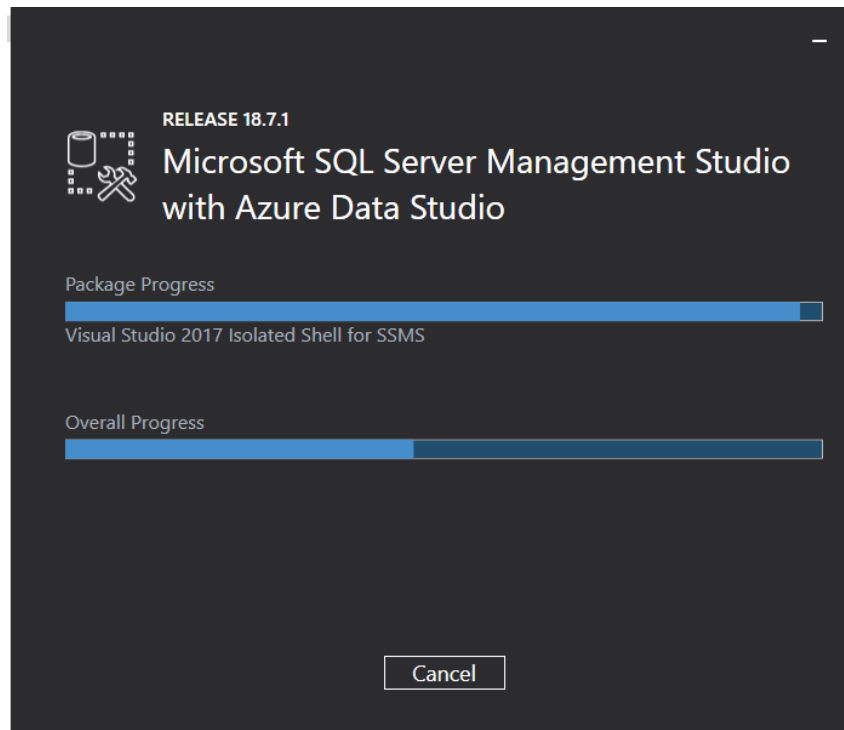

3. SQL Server Management Studio Setup

Run SSMS-Setup-ENU.exe in Windows explorer.

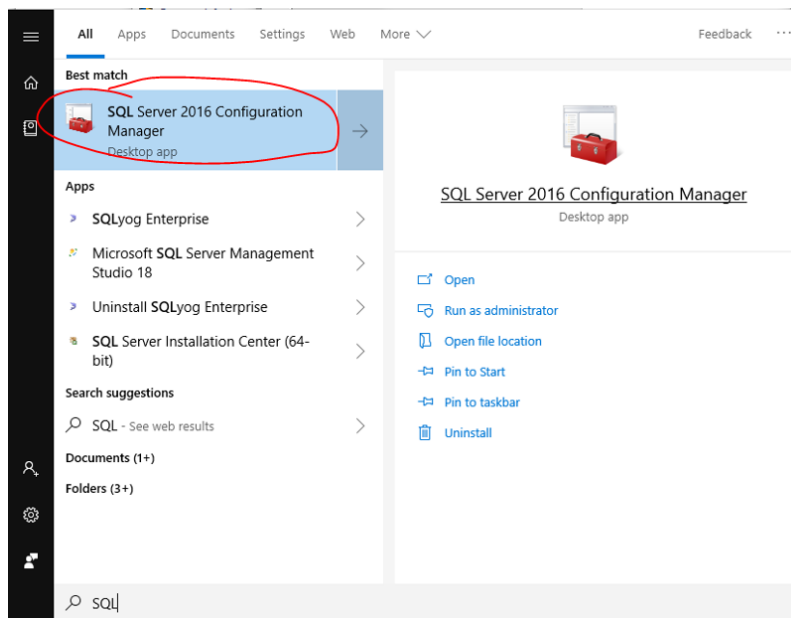

Please wait while progress.

Now, Microsoft SQL Server Management Studio has been installed successfully.

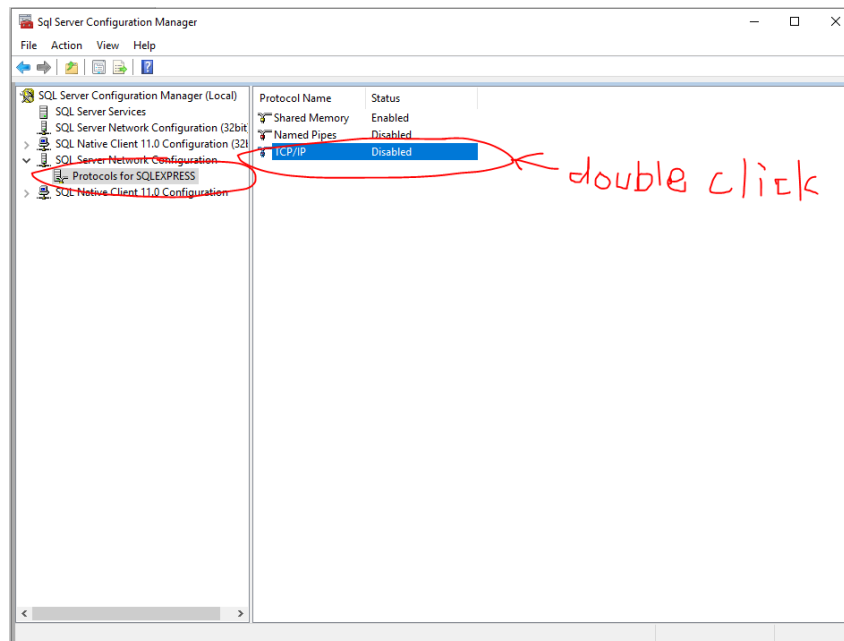

4. Run SQL SERVER Configuration Manager

Run Start->SQL Server 2016->SQL Server 2016 configuration

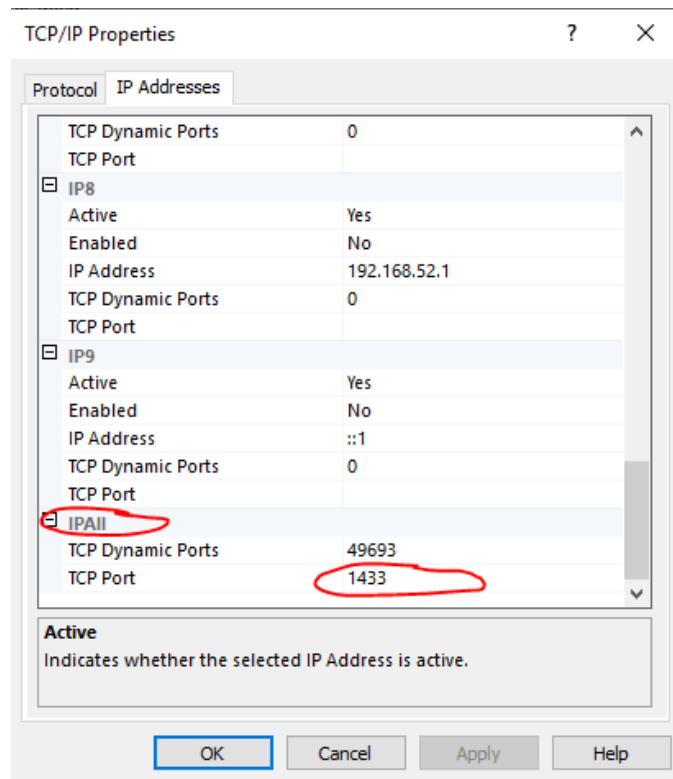

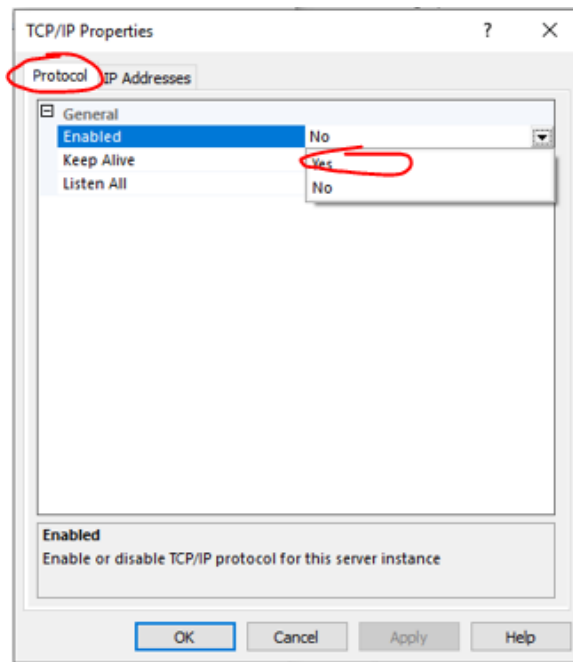

You can see Sql Server Configuration manager opened.

Select the SQL Server network Configuration->Protocols for SQLEXPRESS and at the right panel double click TCP/IP.

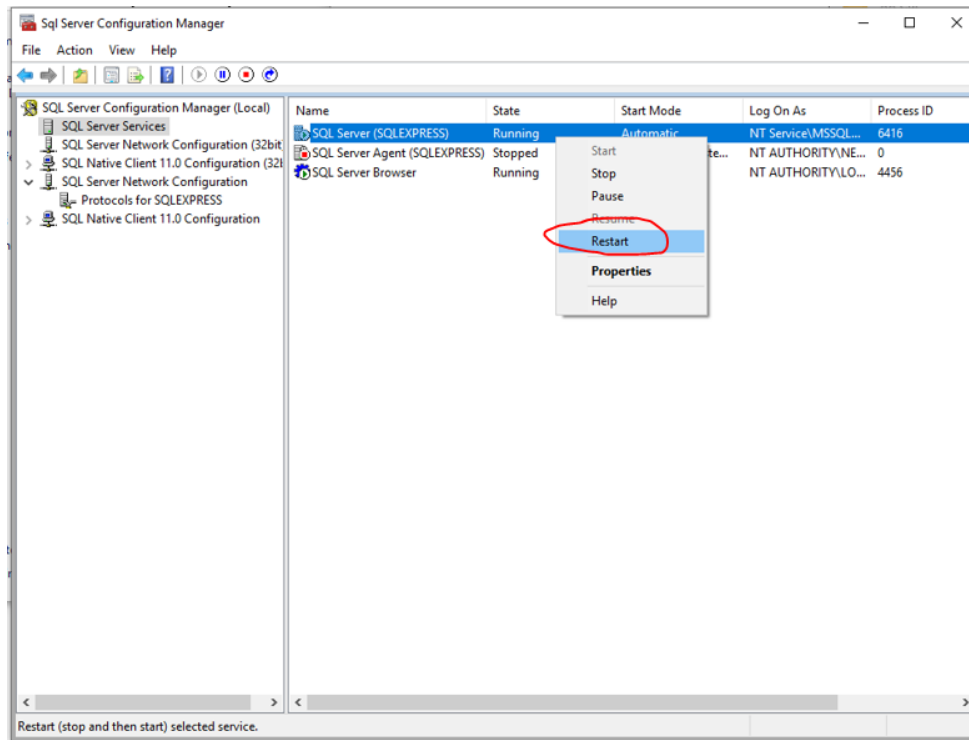

Set enable TCP/IP Protocol.

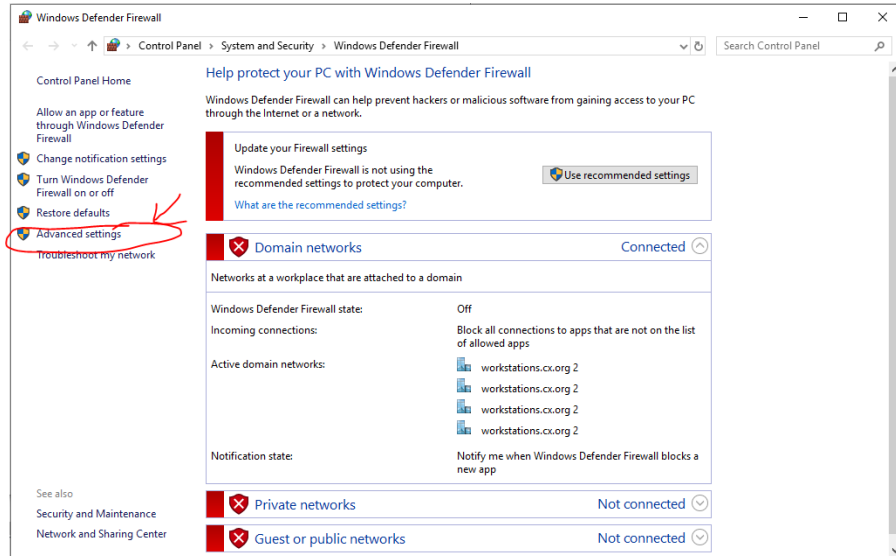

Select IP Addresses tab and in the IPAll set TCP Port to 1433. Click Apply.

Now enable TCP/IP port to 1433. You must restart SQL Server.

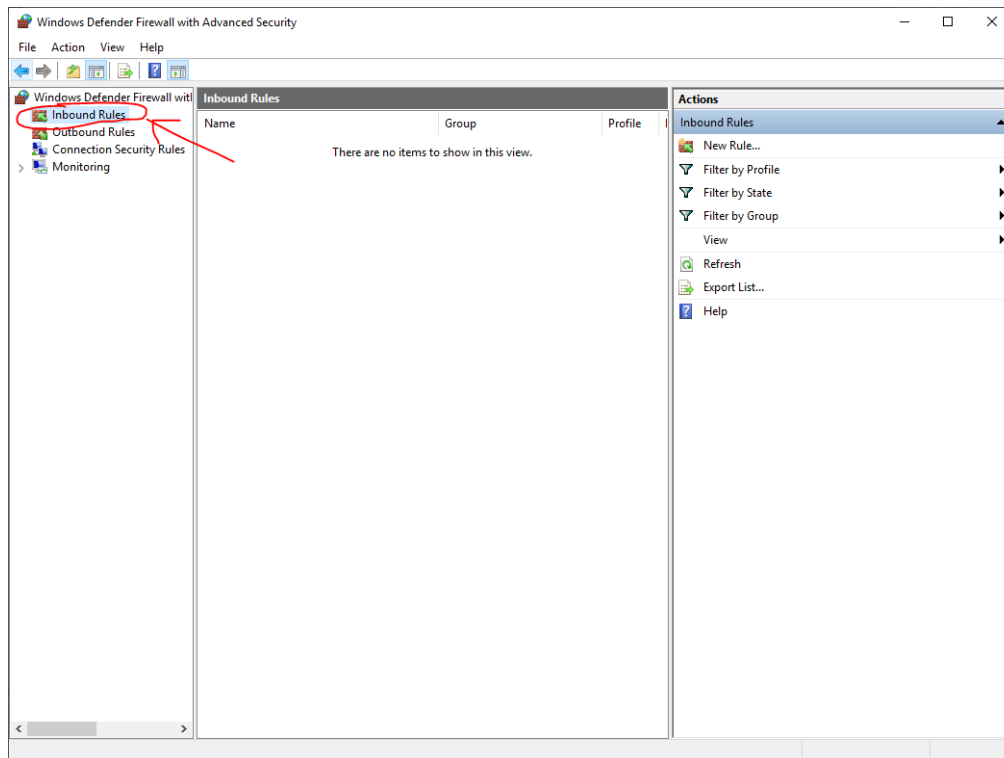

5. Enable port 1433

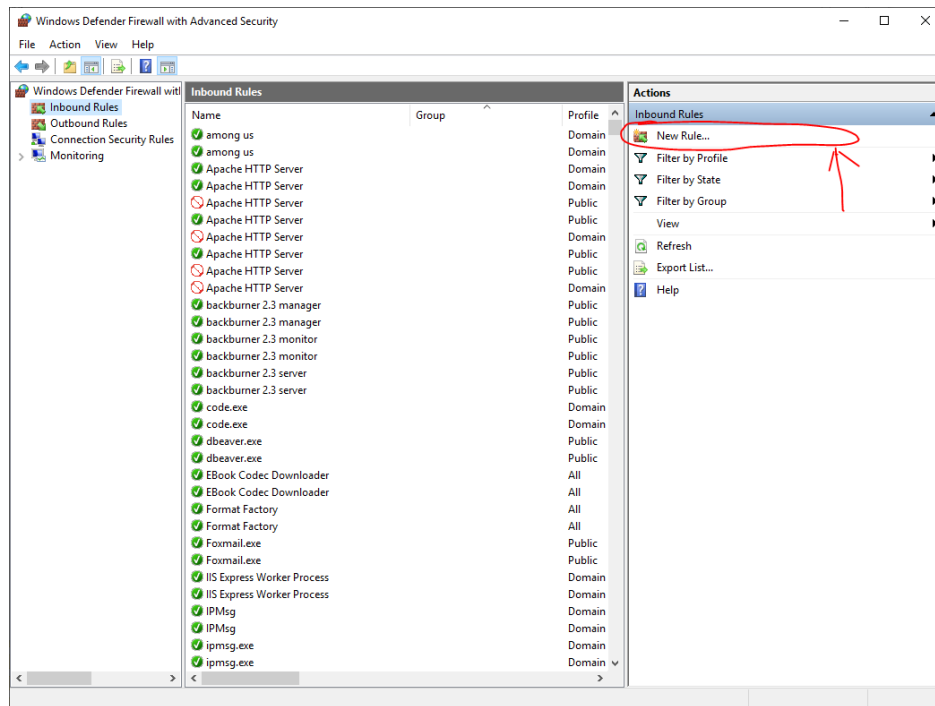

Run System->Setting-Windows Defender Firewall->Advanced Settings

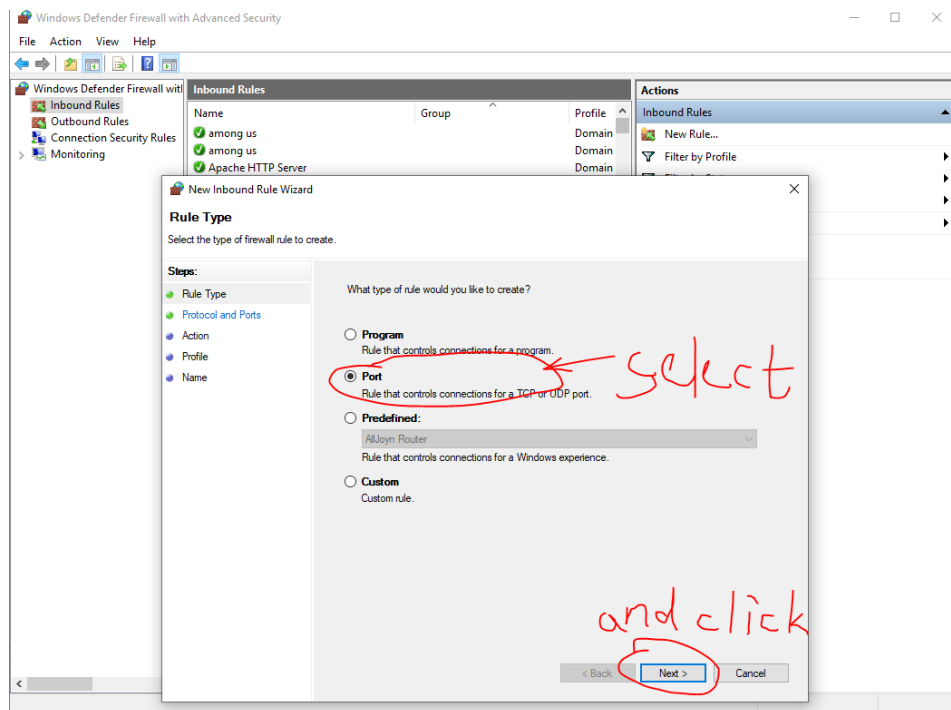

Select inbound Rules

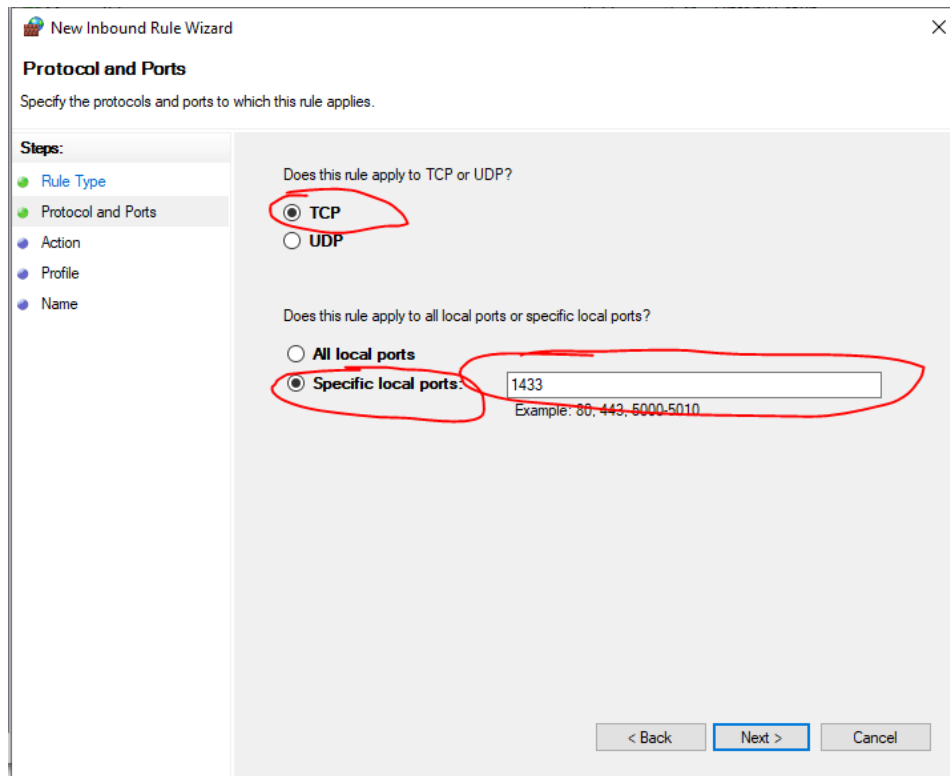

Create new rule and open port 1433

New Inbound Rule Wizard will be displayed. Select Port as a type of rule, and then click Next button.

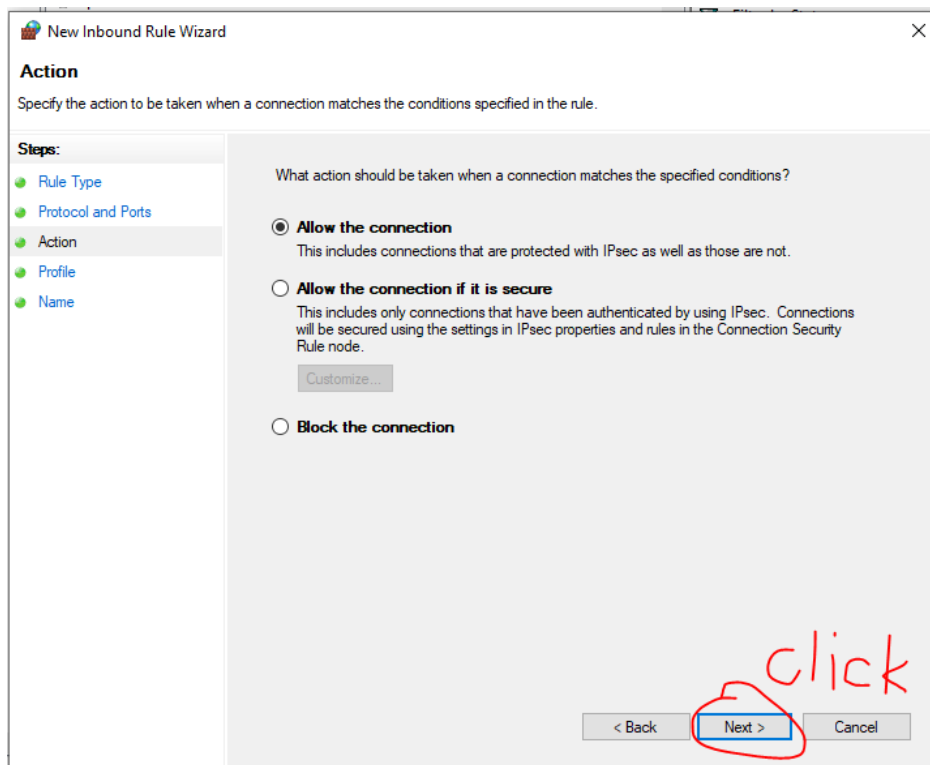

Apply rule to TCP and Input 1433 into Specific local ports

The image shows the 'New Inbound Rule Wizard' window, specifically the 'Protocol and Ports' step. The left sidebar lists the steps: Rule Type, Protocol and Ports (selected), Action, Profile, and Name. The main area contains two questions. The first question is 'Does this rule apply to TCP or UDP?' with radio buttons for 'TCP' and 'UDP'. The 'TCP' radio button is selected and circled in red. The second question is 'Does this rule apply to all local ports or specific local ports?' with radio buttons for 'All local ports' and 'Specific local ports:'. The 'Specific local ports:' radio button is selected and circled in red. Next to it is a text box containing '1433', which is also circled in red. Below the text box is an example: 'Example: 80, 443, 5000-5010'. At the bottom right, there are three buttons: '< Back', 'Next >', and 'Cancel'. The 'Next >' button is highlighted with a blue border.

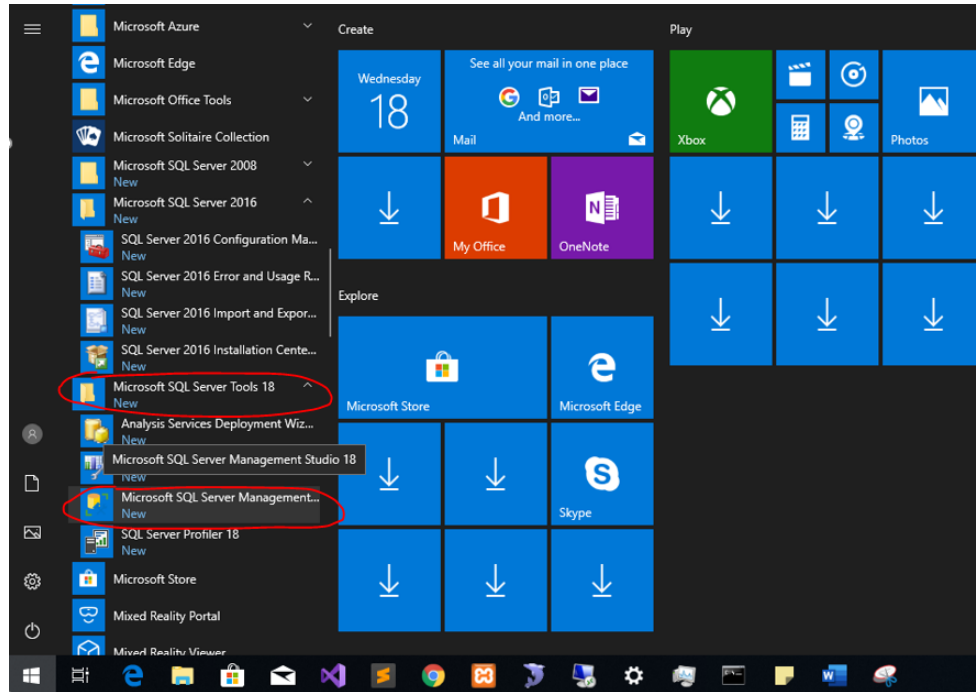

Select Allow the connection and click Next.

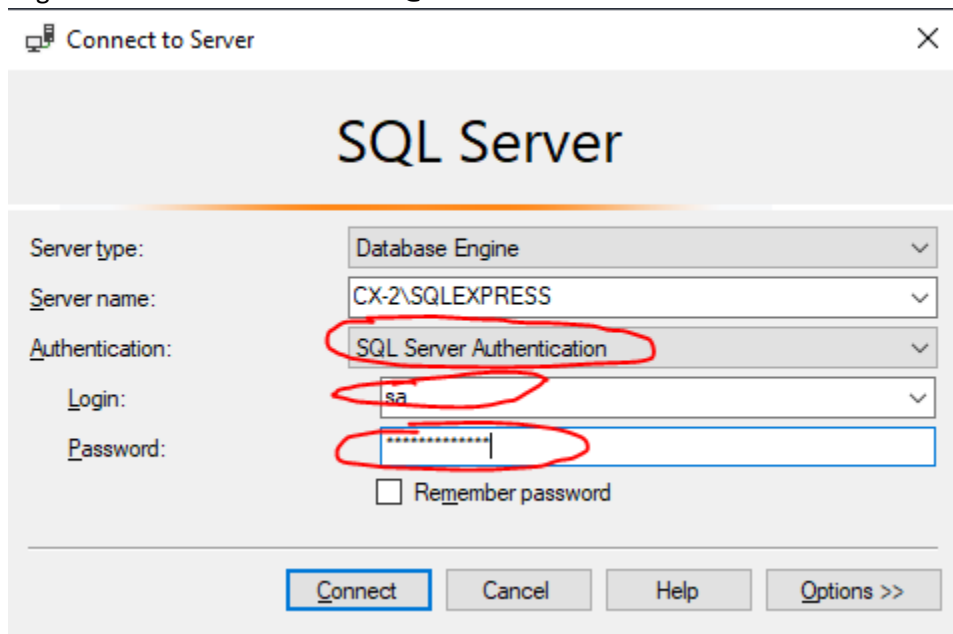

The image shows the 'New Inbound Rule Wizard' window, specifically the 'Action' step. The left sidebar lists the steps: Rule Type, Protocol and Ports, Action (selected), Profile, and Name. The main area contains the question 'What action should be taken when a connection matches the specified conditions?'. There are three radio button options: 'Allow the connection', 'Allow the connection if it is secure', and 'Block the connection'. The 'Allow the connection' radio button is selected. Below it is a description: 'This includes connections that are protected with IPsec as well as those are not.' Below the 'Allow the connection if it is secure' option is a description: 'This includes only connections that have been authenticated by using IPsec. Connections will be secured using the settings in IPsec properties and rules in the Connection Security Rule node.' Below this description is a 'Customize...' button. At the bottom right, there are three buttons: '< Back', 'Next >', and 'Cancel'. The 'Next >' button is circled in red, and the word 'click' is written in red above it.

6. Run SQL Server Management Studio and Create a new database and tables for our application.

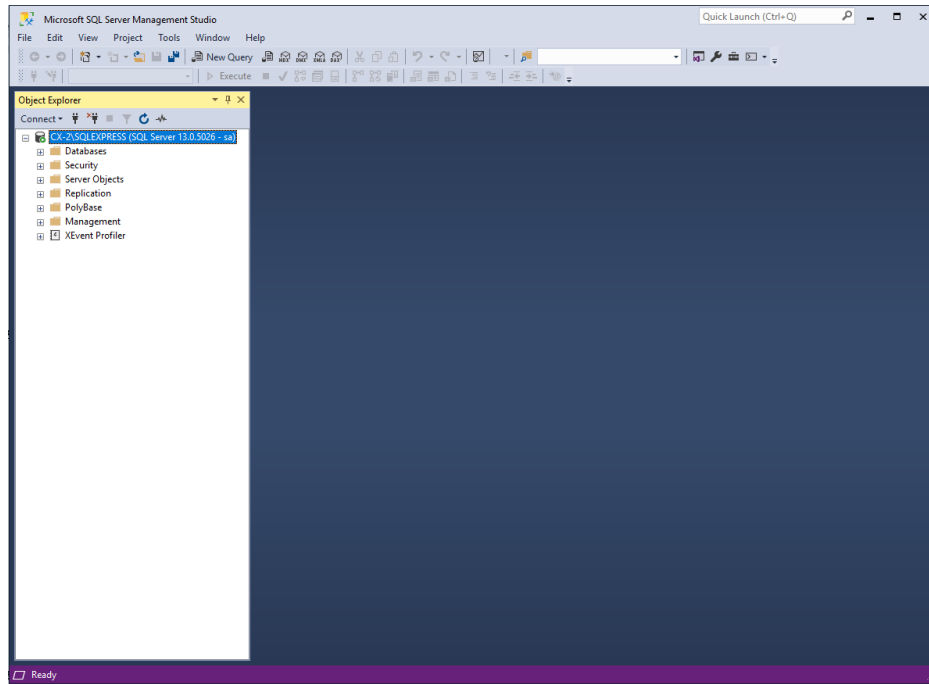

1) Run Start->SQL Server Tools 18->Microsoft SQL Server Management.

2) Connect to Server
Set Authentication to *SQL Server Authentication*.
Login: sa Password: admin@123.com

You have been connected to SSMS.

7. Test connection in application

Run the app from another pc and connect to remote sql server.

A screenshot of a Windows application window titled "Form1". It contains a connection form with the following fields: "Host Address" with the value "192.168.100.34", "User" with the value "sa", "Password" with masked characters "*****", "Port" with the value "1433", and "Database" with the value "Hordens". A "Connect" button is located at the bottom right of the form.

Host Address: Host IP Address

User: SQL Account you have created when you set up SQL Server. (sa)

Password: password(admin@123.com)

Database: Database to connect. You created the database in SSMS.

Test connection. If you configure SQL Server correctly, you will be managed to run the app.
