Features:

- Instance Features**
 - ☒ Database Engine Services
 - ☒ SQL Server Replication
- Shared Features
 - ☒ SQL Client Connectivity SDK
- Redistributable Features

Select All Unselect All

Feature description:

The configuration and operation of each instance feature of a SQL Server instance is isolated from other SQL Server instances. SQL Server instances can operate side-by-side on the same computer.

Prerequisites for selected features:

Already installed:

- Windows PowerShell 3.0 or higher
- Microsoft Visual Studio 2010 Redistributable

Disk Space Requirements

Drive C: 1058 MB required, 18298 MB available

Instance root directory: C:\Program Files\Microsoft SQL Server\

Shared feature directory: C:\Program Files\Microsoft SQL Server\

Shared feature directory (x86): C:\Program Files (x86)\Microsoft SQL Server\

Service Accounts Collation

Microsoft recommends that you use a separate account for each SQL Server service.

Service	Account Name	Password	Startup Type
SQL Server Database Engine	NT Service\MSSQL\$SQL...		Automatic
SQL Server Browser	NT AUTHORITY\LOCAL ...		Disabled

☐ Grant Perform Volume Maintenance Task privilege to SQL Server Database Engine Service

This privilege enables instant file initialization by avoiding zeroing of data pages. This may lead to information disclosure by allowing deleted content to be accessed.

SQL Server 2016 installation completed successfully.

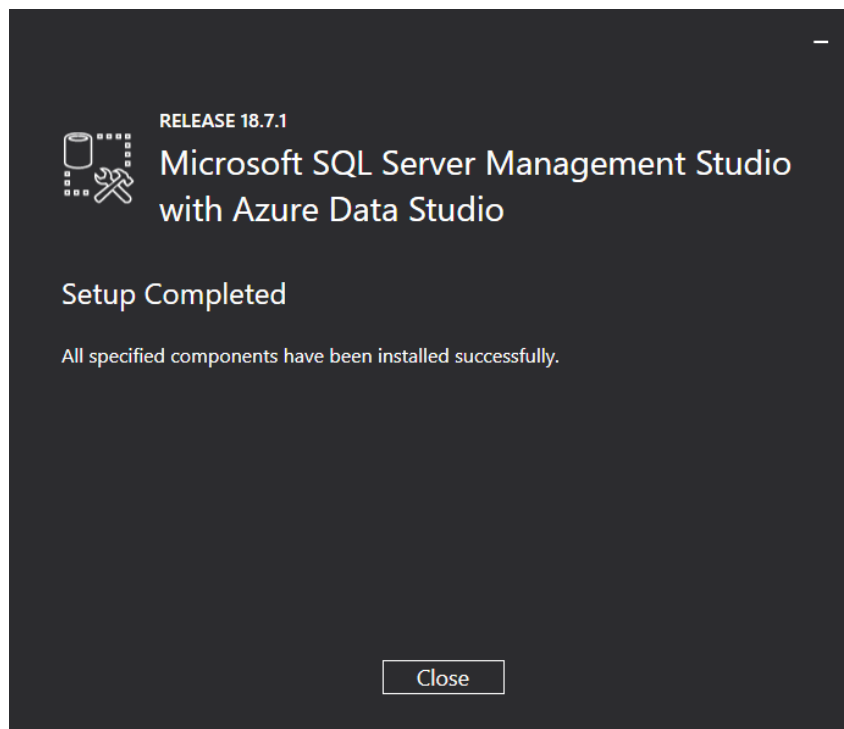

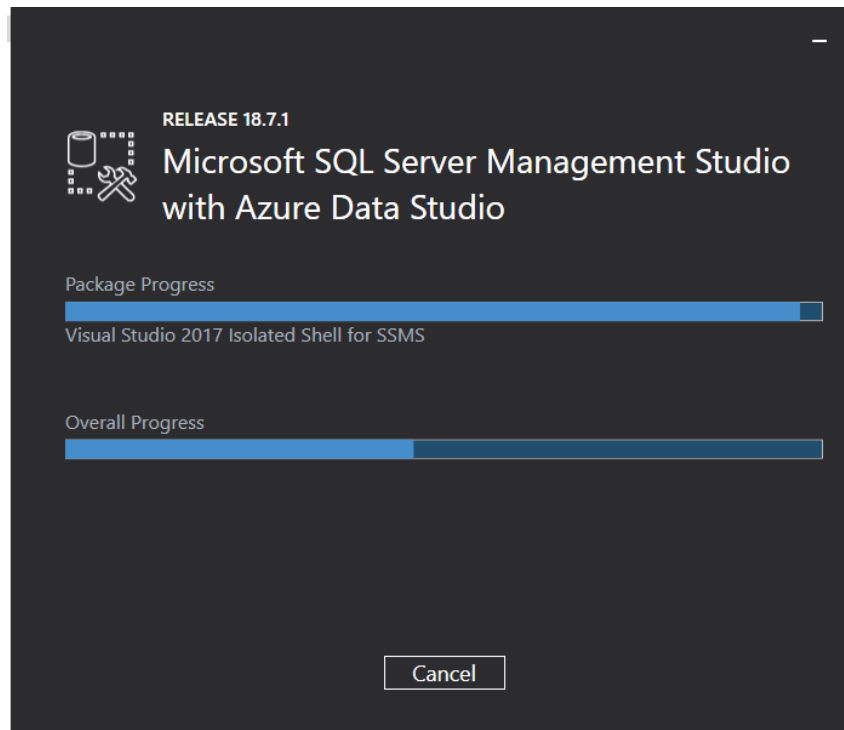

3. SQL Server Management Studio Setup

Run SSMS-Setup-ENU.exe in Windows explorer.

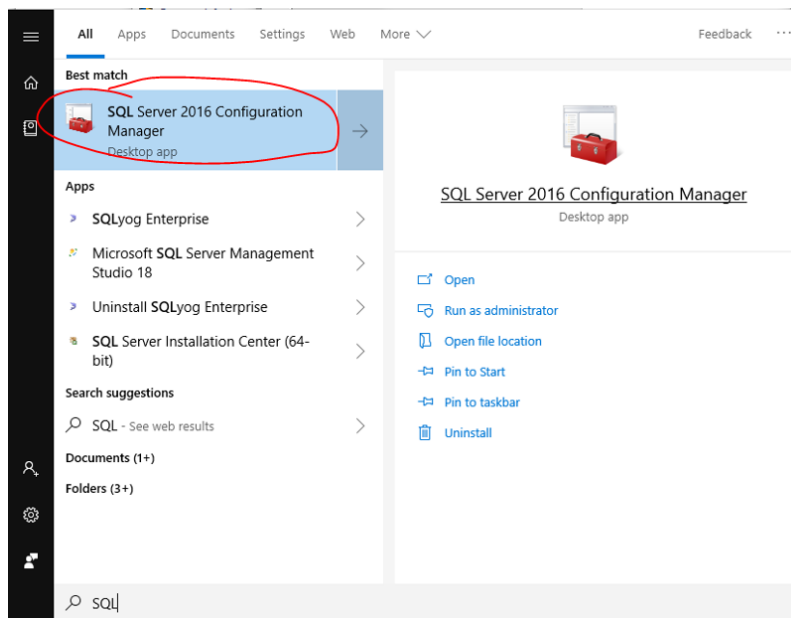

Please wait while progress.

Now, Microsoft SQL Server Management Studio has been installed successfully.

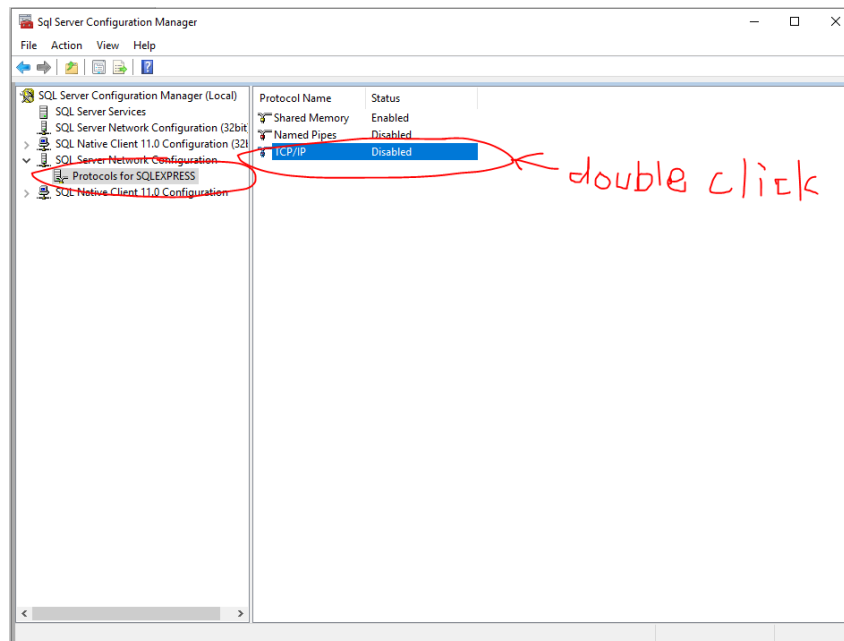

4. Run SQL SERVER Configuration Manager

Run Start->SQL Server 2016->SQL Server 2016 configuration

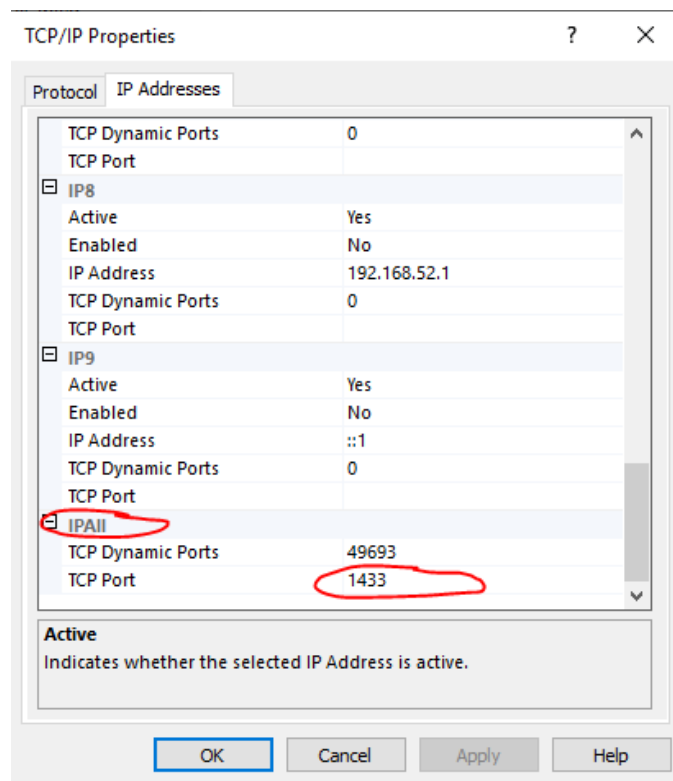

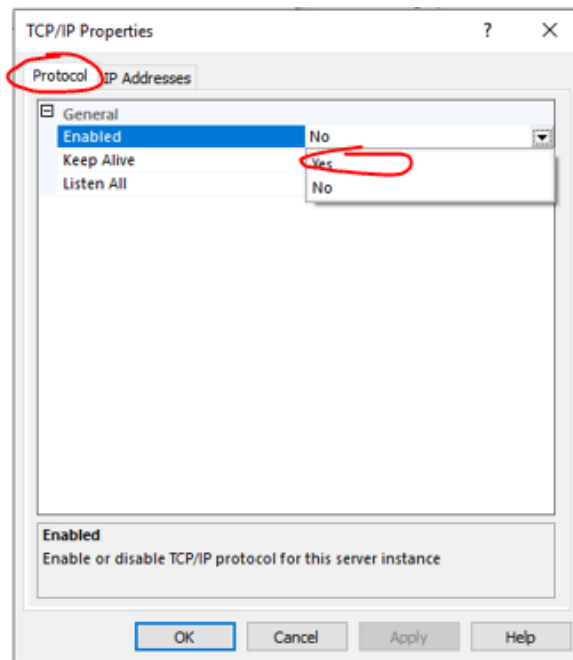

You can see Sql Server Configuration manager opened.

Select the SQL Server network Configuration->Protocols for SQLEXPRESS and at the right panel double click TCP/IP.

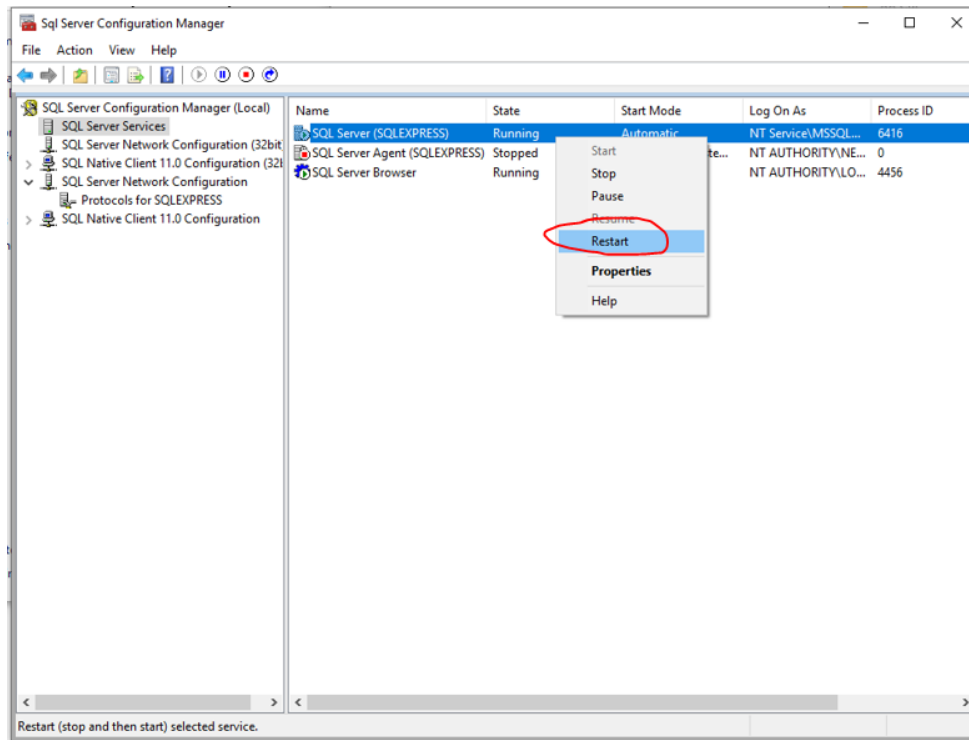

Set enable TCP/IP Protocol.

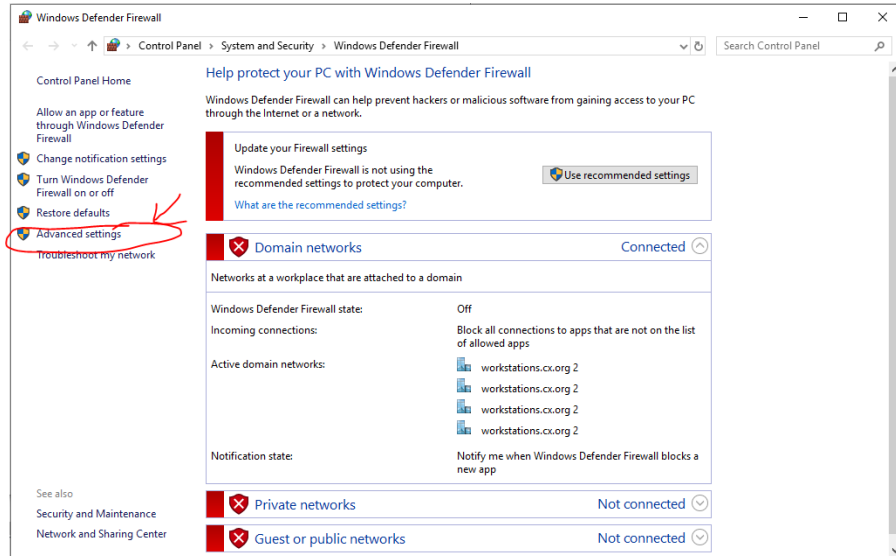

Select IP Addresses tab and in the IPAll set TCP Port to 1433. Click Apply.

Now enable TCP/IP port to 1433. You must restart SQL Server.

5. Enable port 1433

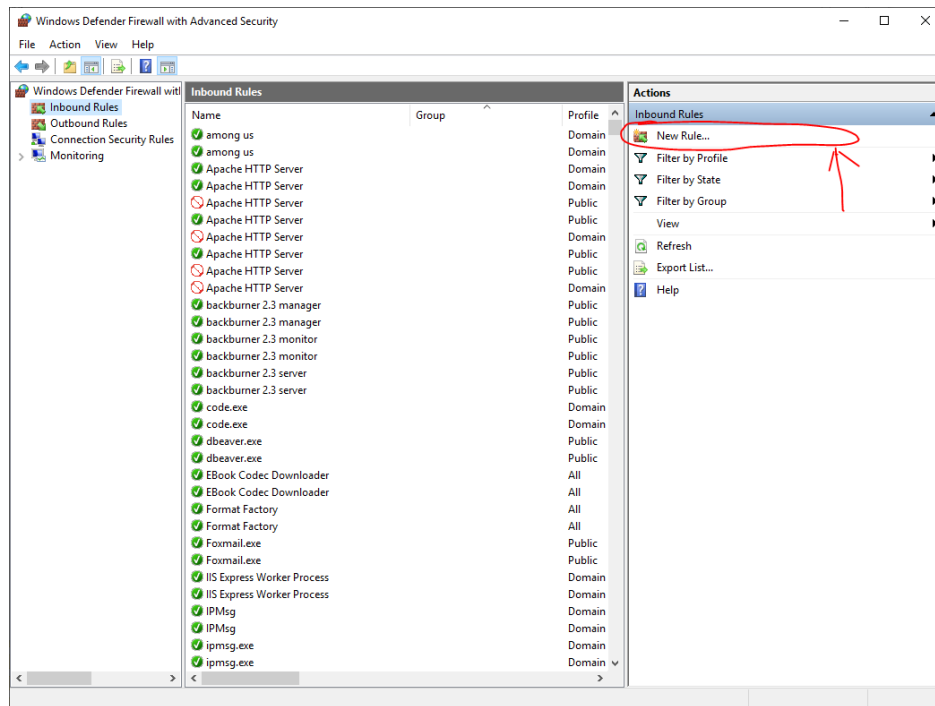

Run System->Setting-Windows Defender Firewall->Advanced Settings

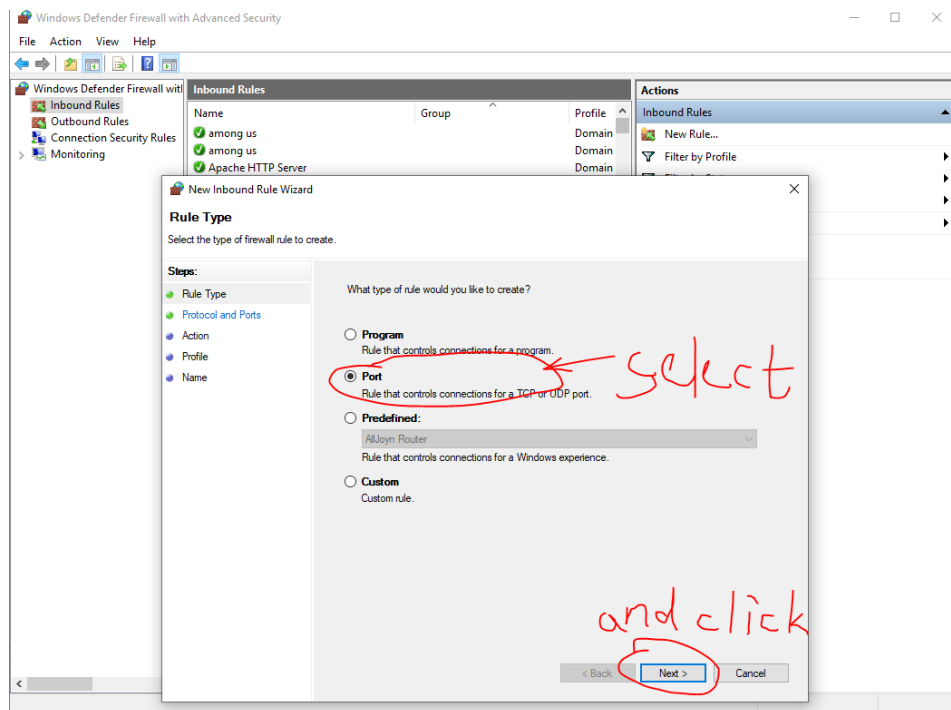

Select inbound Rules

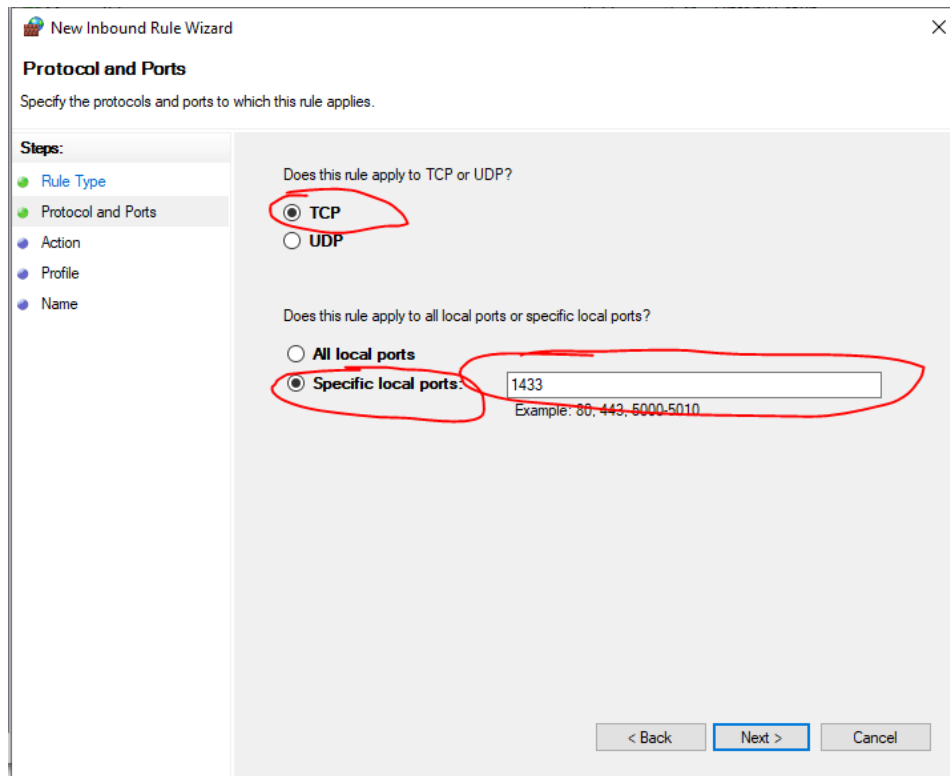

Create new rule and open port 1433

New Inbound Rule Wizard will be displayed. Select Port as a type of rule, and then click Next button.

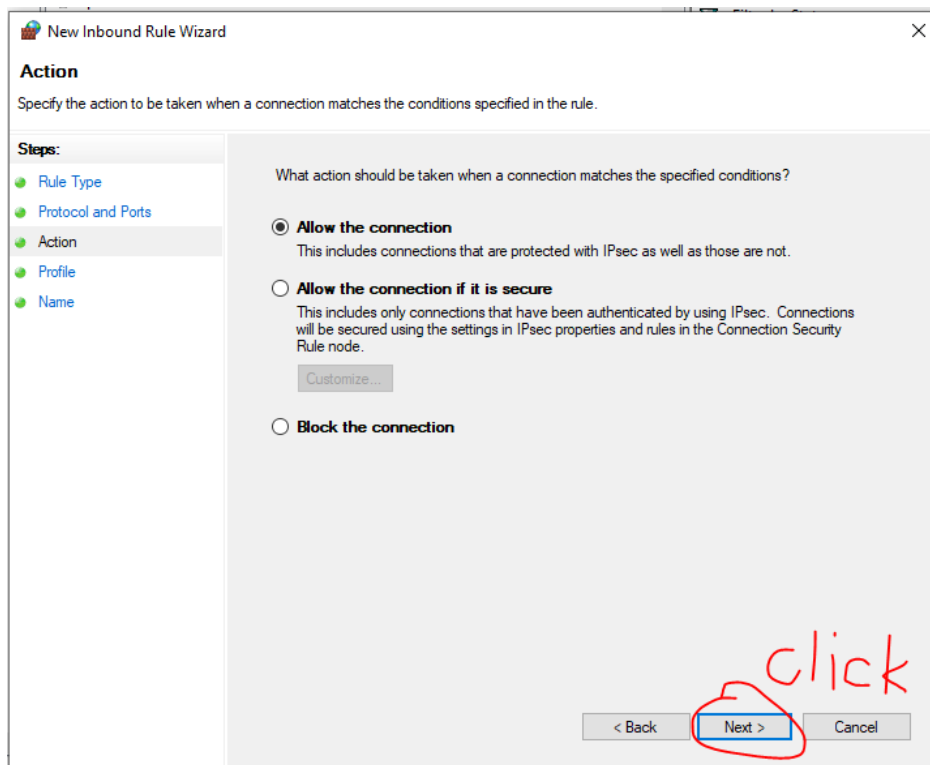

Apply rule to TCP and Input 1433 into Specific local ports

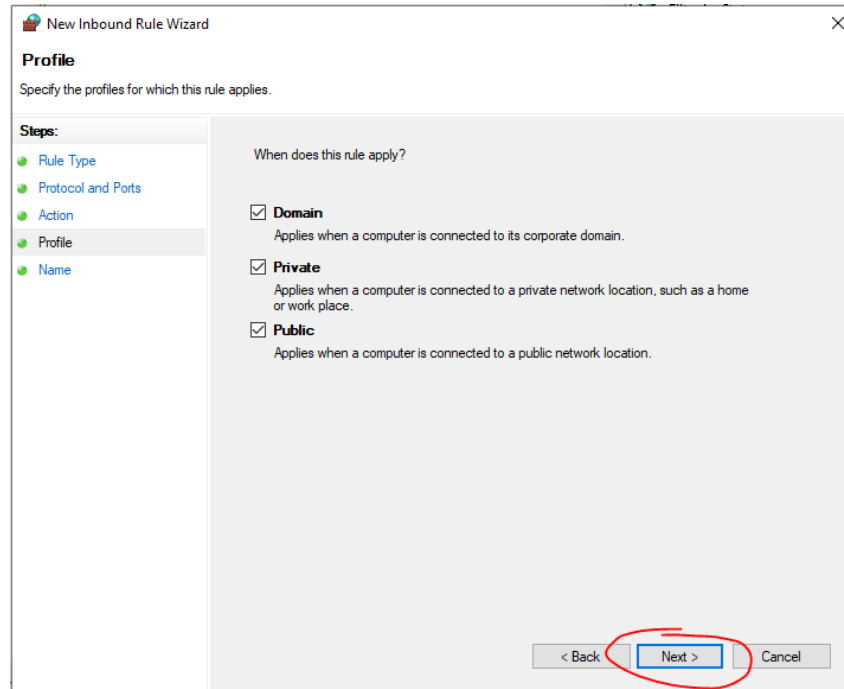

The image shows the 'New Inbound Rule Wizard' window, specifically the 'Protocol and Ports' step. The left sidebar lists the steps: Rule Type, Protocol and Ports (selected), Action, Profile, and Name. The main area contains two questions. The first question is 'Does this rule apply to TCP or UDP?' with radio buttons for 'TCP' (selected and circled in red) and 'UDP'. The second question is 'Does this rule apply to all local ports or specific local ports?' with radio buttons for 'All local ports' and 'Specific local ports:' (selected and circled in red). Next to 'Specific local ports:' is a text box containing '1433', which is also circled in red. Below the text box is an example: 'Example: 80, 443, 5000-5010'. At the bottom right are three buttons: '< Back', 'Next >' (highlighted with a blue border), and 'Cancel'.

Select Allow the connection and click Next.

The image shows the 'New Inbound Rule Wizard' window, specifically the 'Action' step. The left sidebar lists the steps: Rule Type, Protocol and Ports, Action (selected), Profile, and Name. The main area contains the question 'What action should be taken when a connection matches the specified conditions?'. There are three radio button options: 'Allow the connection' (selected), 'Allow the connection if it is secure', and 'Block the connection'. Below 'Allow the connection' is a description: 'This includes connections that are protected with IPsec as well as those are not.' Below 'Allow the connection if it is secure' is a description: 'This includes only connections that have been authenticated by using IPsec. Connections will be secured using the settings in IPsec properties and rules in the Connection Security Rule node.' Below this description is a 'Customize...' button. At the bottom right are three buttons: '< Back', 'Next >' (circled in red with the word 'click' written in red above it), and 'Cancel'.

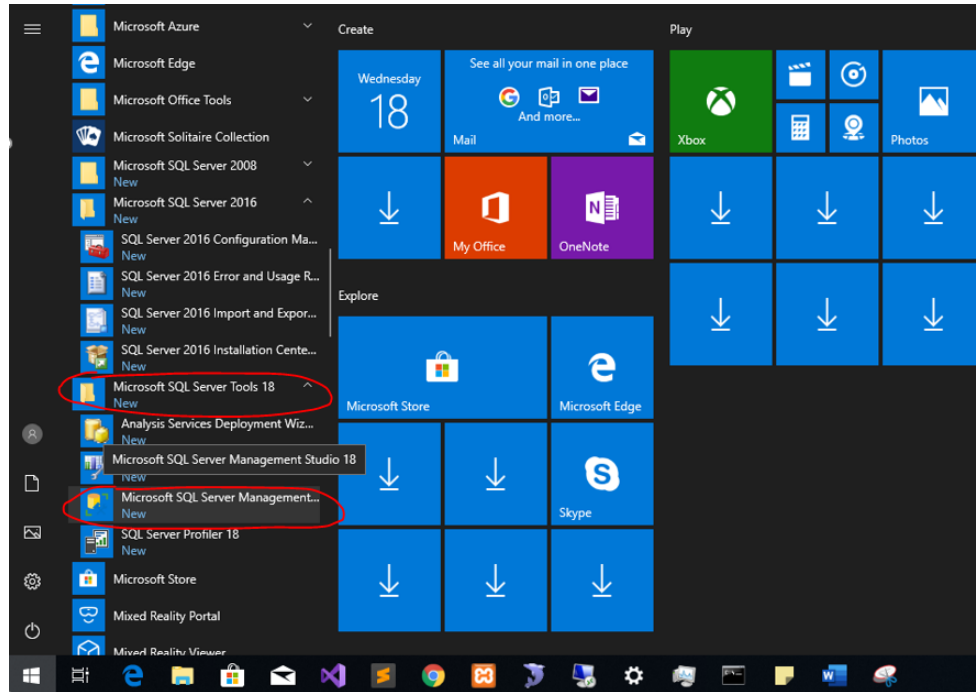

Input Rule name and click Finish. You can find new Rule has been added in the list.

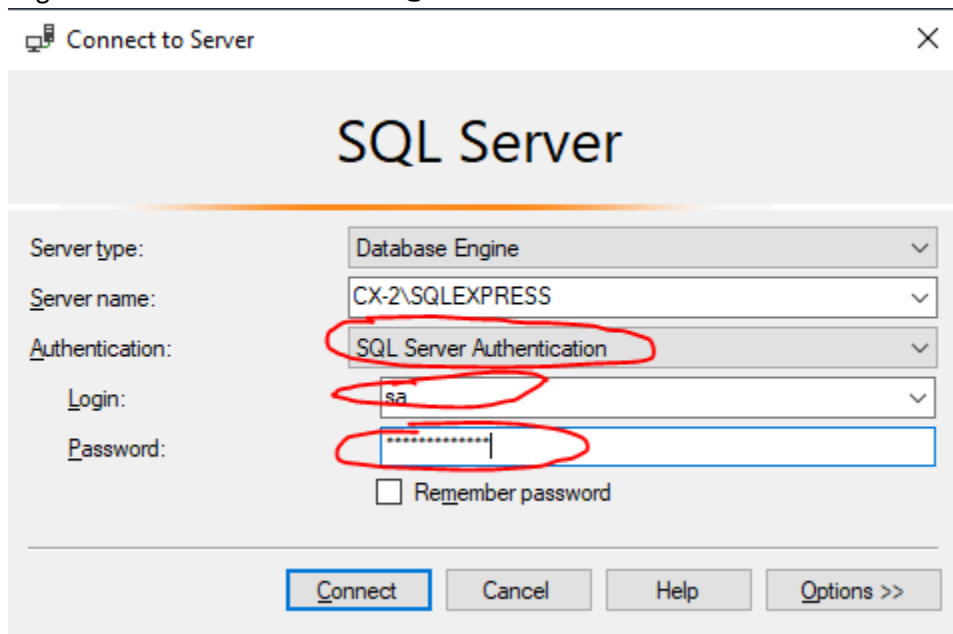

Now the port 1433 has been enabled so that any remote user can access to this machine via port 1433.

6. Run SQL Server Management Studio and Create a new database and tables for our application.

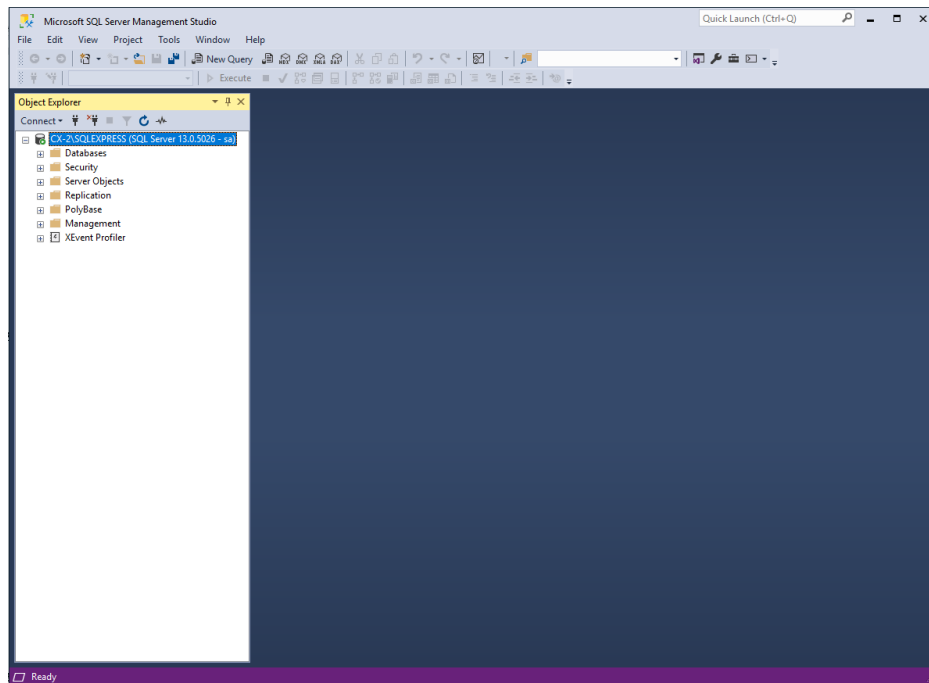

1) Run Start->SQL Server Tools 18->Microsoft SQL Server Management.

2) Connect to Server
Set Authentication to *SQL Server Authentication*.
Login: sa Password: admin@123.com

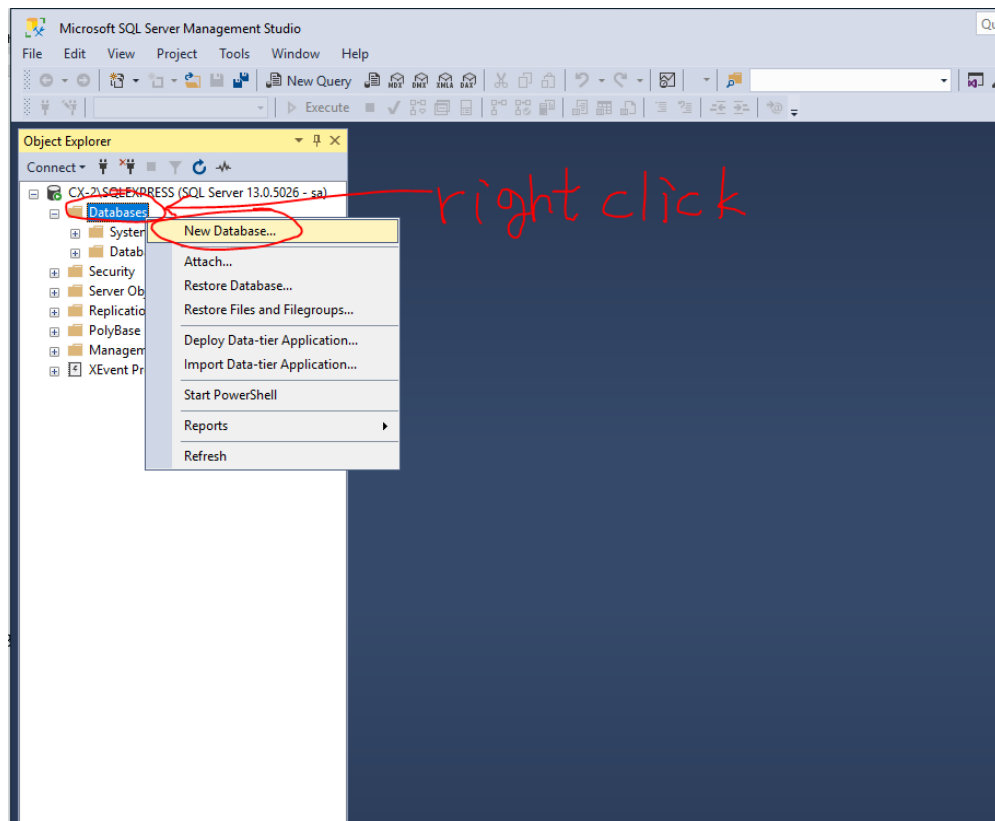

You have been connected to SSMS.

3) Create a new Database “Hordens”

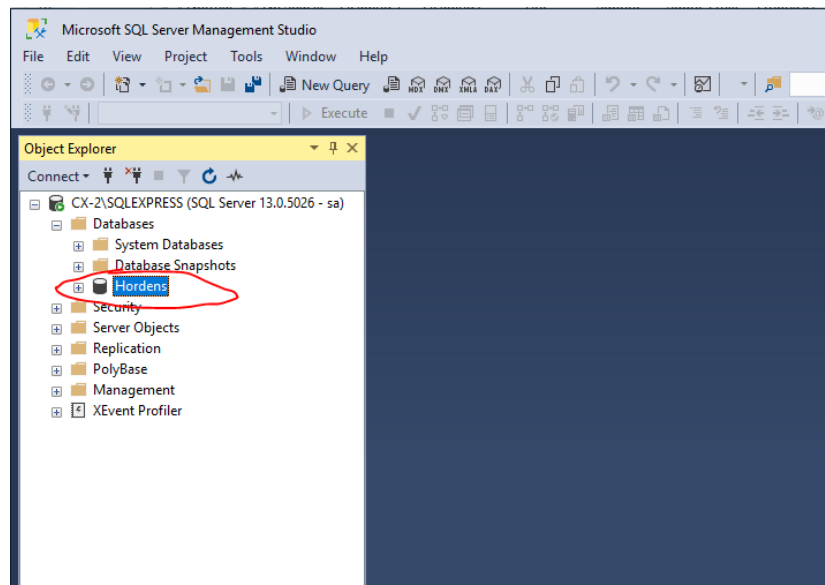

In Object Explorer, right click *Databases* and select *New Database...*

Input Database name “Hordens” and click OK.

New database “Hordens” has been created.

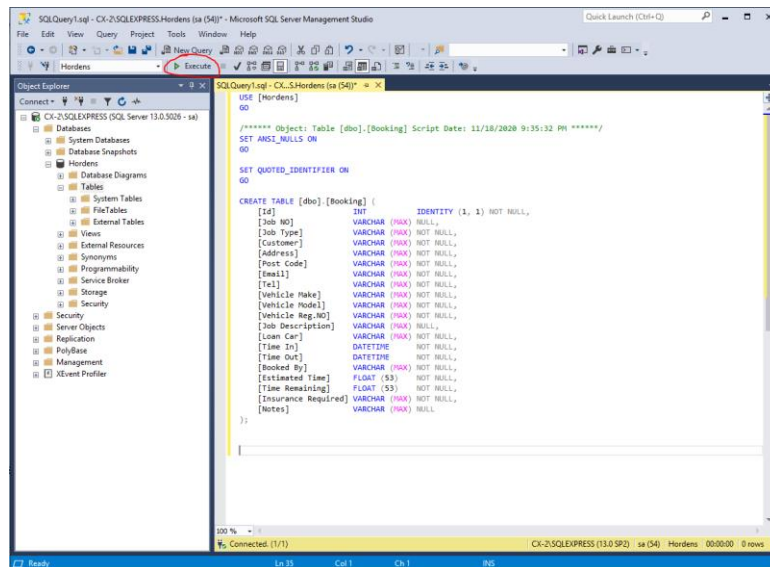

4) Create 3 tables: *dbo.Booking*, *dbo.JobType*, *dbo.Technician*

Navigate the *Hordens*->*Tables* and Click *New Query* in the tooltip

To Create a table *"dbo.Booking"*, Execute script as follows. And Refresh Tables.

Script of dbo.Booking

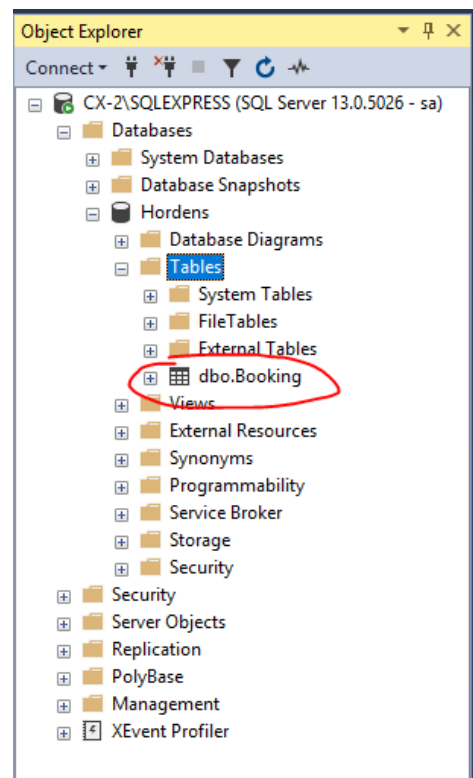

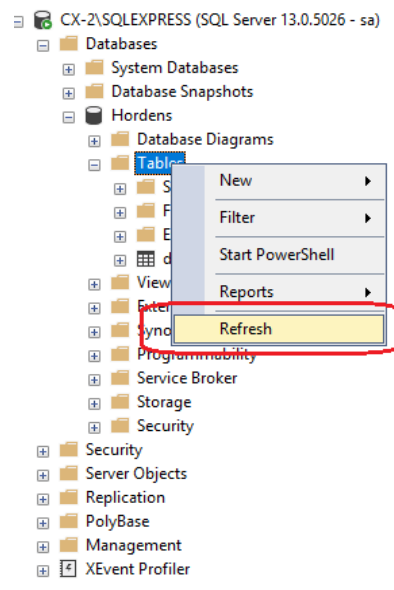

```
USE [Hordens]
GO

/***** Object: Table [dbo].[Booking] Script Date: 11/18/2020 9:35:32 PM *****/
SET ANSI_NULLS ON
GO

SET QUOTED_IDENTIFIER ON
GO

CREATE TABLE [dbo].[Booking] (
    [Id] INT IDENTITY (1, 1) NOT NULL,
    [Job NO] VARCHAR (MAX) NULL,
    [Job Type] VARCHAR (MAX) NOT NULL,
    [Customer] VARCHAR (MAX) NOT NULL,
    [Address] VARCHAR (MAX) NOT NULL,
    [Post Code] VARCHAR (MAX) NOT NULL,
    [Email] VARCHAR (MAX) NOT NULL,
    [Tel] VARCHAR (MAX) NOT NULL,
    [Vehicle Make] VARCHAR (MAX) NOT NULL,
    [Vehicle Model] VARCHAR (MAX) NOT NULL,
    [Vehicle Reg.NO] VARCHAR (MAX) NOT NULL,
    [Job Description] VARCHAR (MAX) NULL,
    [Loan Car] VARCHAR (MAX) NOT NULL,
    [Time In] DATETIME NOT NULL,
    [Time Out] DATETIME NOT NULL,
    [Booked By] VARCHAR (MAX) NOT NULL,
    [Estimated Time] FLOAT (53) NOT NULL,
    [Time Remaining] FLOAT (53) NOT NULL,
    [Insurance Required] VARCHAR (MAX) NOT NULL,
    [Notes] VARCHAR (MAX) NULL
);
```

You can see a new table *dbo.Booking* has been added into database *Hordens*.

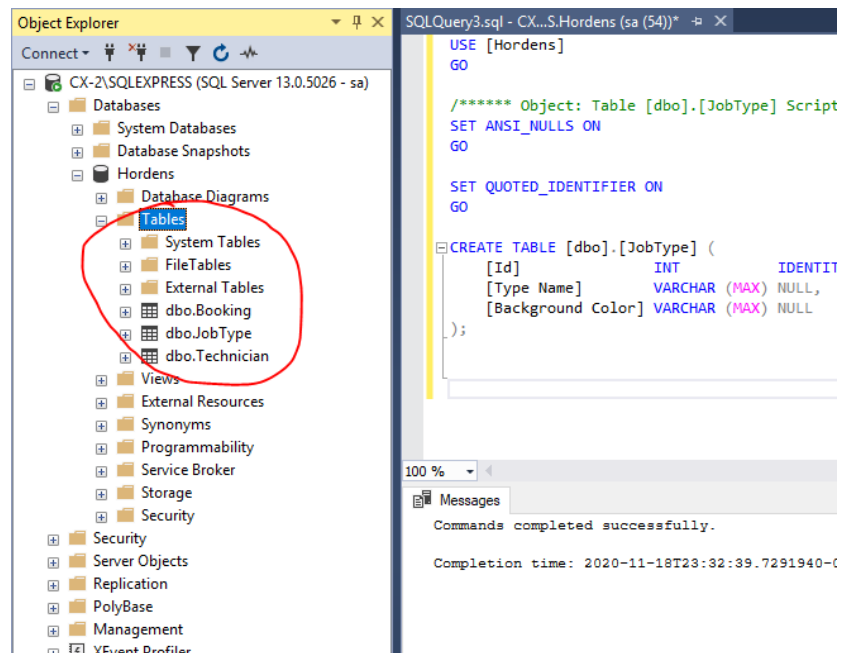

Create databases *dbo.JobType* and *dbo.Technician* at the same way.

Scripts of *JobType* and *Technician* as follows

Script of JobType
<pre>USE [Hordens] GO /***** Object: Table [dbo].[JobType] Script Date: 11/18/2020 9:35:47 PM *****/ SET ANSI_NULLS ON GO SET QUOTED_IDENTIFIER ON GO CREATE TABLE [dbo].[JobType] ([Id] INT IDENTITY (1, 1) NOT NULL, [Type Name] VARCHAR (MAX) NULL, [Background Color] VARCHAR (MAX) NULL);</pre>

Script of Technician
<pre>USE [Hordens] GO /***** Object: Table [dbo].[Technician] Script Date: 11/18/2020 9:35:53 PM *****/ SET ANSI_NULLS ON GO SET QUOTED_IDENTIFIER ON GO CREATE TABLE [dbo].[Technician] ([Id] INT IDENTITY (1, 1) NOT NULL, [Name] VARCHAR (MAX) NOT NULL, [Working Hours] FLOAT (53) NOT NULL, [Date] DATETIME NOT NULL);</pre>

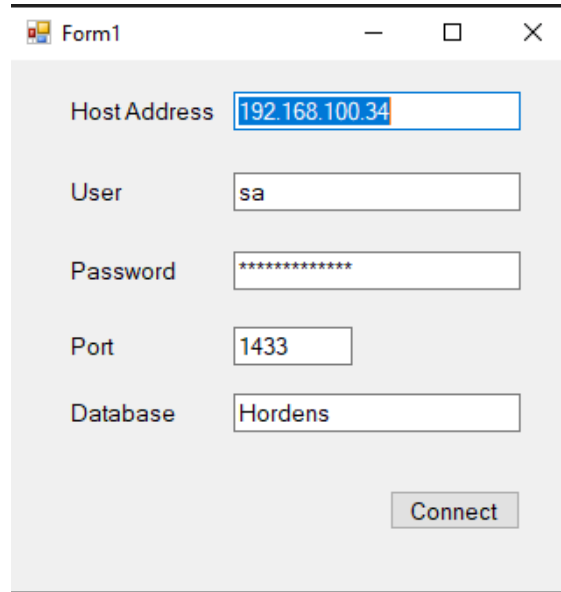

Now, database *Hordens* and 3 tables have been created successfully.

Tips: You can Add or Edit SQL Account name and password in this SSMS.

7. Test connection in application

Run the app from another pc and connect to remote sql server.

The screenshot shows a Windows application window titled "Form1". It contains five input fields and a "Connect" button. The fields are labeled "Host Address", "User", "Password", "Port", and "Database". The "Host Address" field contains the IP address "192.168.100.34". The "User" field contains "sa". The "Password" field contains a series of asterisks "*****". The "Port" field contains "1433". The "Database" field contains "Hordens".

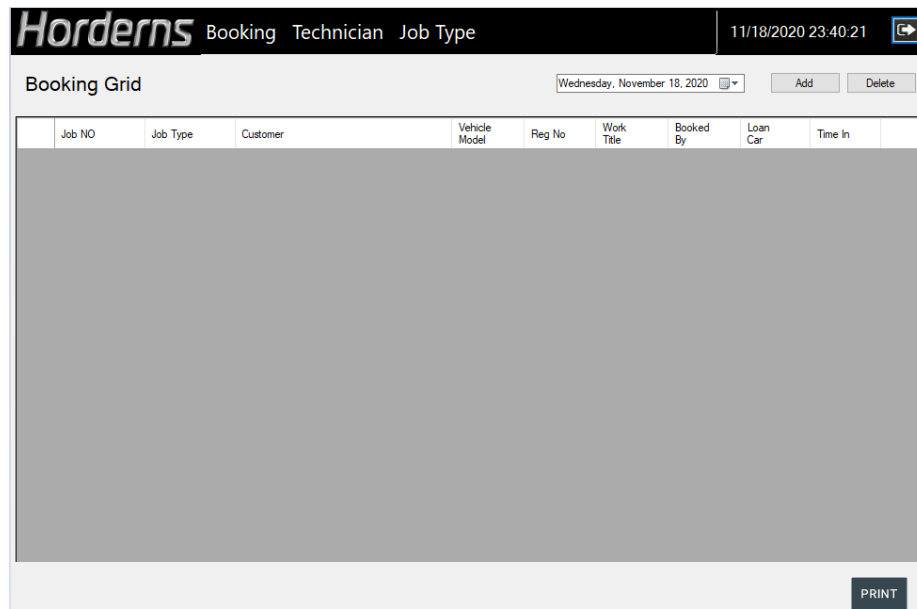

Host Address: Host IP Address

User: SQL Account you have created when you set up SQL Server. (sa)

Password: password(admin@123.com)

Database: Database to connect. You created the database in SSMS.

Test connection. If you configure SQL Server correctly, you will managed to run the app.

The screenshot shows the main interface of the "Horderns" application. At the top, there is a header bar with the "Horderns" logo and navigation links for "Booking", "Technician", and "Job Type". On the right side of the header, the date and time "11/18/2020 23:40:21" are displayed along with a refresh icon. Below the header, there is a section titled "Booking Grid" with a date selector set to "Wednesday, November 18, 2020" and buttons for "Add" and "Delete". The main area contains a table with the following columns: Job NO, Job Type, Customer, Vehicle Model, Reg No, Work Title, Booked By, Loan Car, and Time In. The table body is currently empty. At the bottom right corner, there is a "PRINT" button.

THANK YOU!!!
